### INFORMATION TECHNOLOGY SOLUTIONS THAT WORK FOR YOUR BUSINESS.

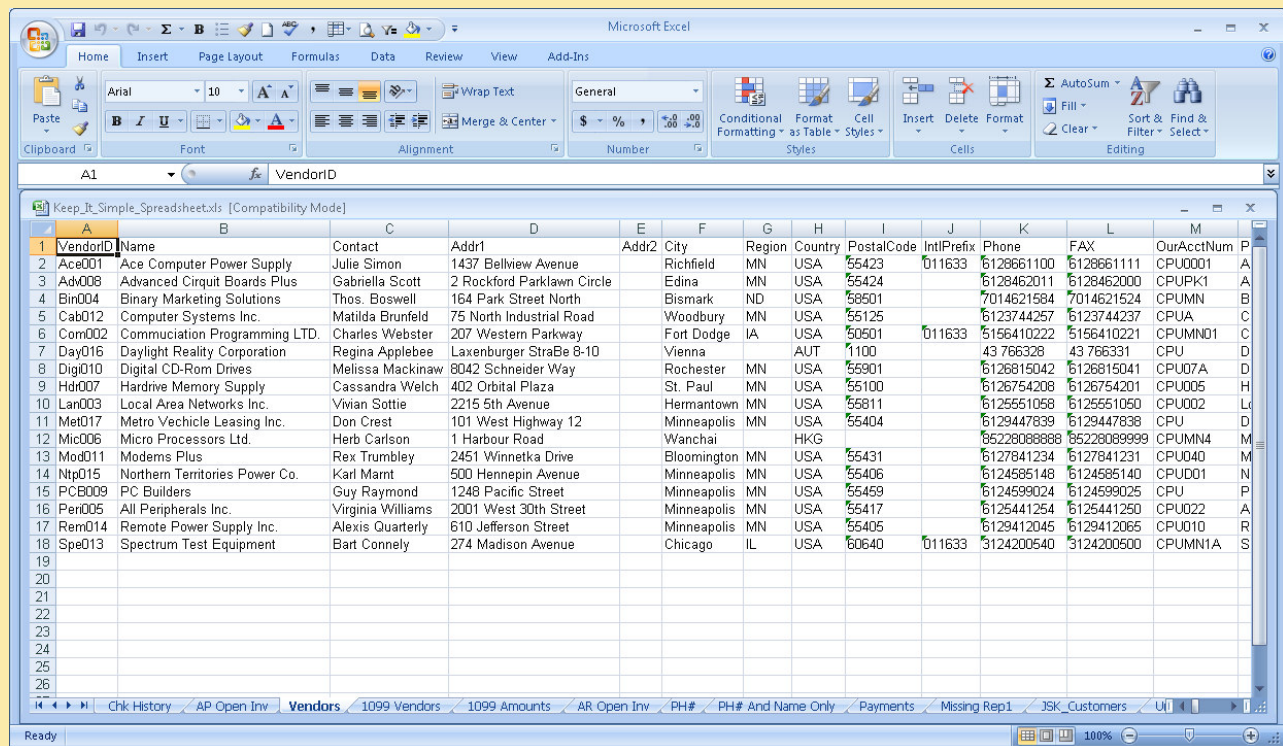

Bring your TRAVERSE data into Excel with the click of a button.  
See only the fields you want to see.

We're so sure you are going to love using this that we are giving you a trial version to run for 30 days. When you see for yourself that you can't do without it, you can contact us for a non-expiring product key.

Simple and easy to use SELECT statements gather your TRAVERSE data from views that are standard in your installation. As with everything, one size does not fit all. You may have requirements that are different than everyone else. We can help by creating a custom view or stored procedure that returns what ever data you need for significantly less than the cost of a custom report. With **KISS** you have the vehicle to run these stored procedures with date parameters to limit the data returned.

The heart of the spreadsheet is the Reports tab. From this tab you control the connections, logins, the report parameters and the new report tab names. Once a report is added to the list, all you have to do is click on the Run Reports Now button.

The data for each report is contained in its own tab. From here you can work with the data, creating exactly the report you need.
