

TRAVERSE MOBILE ORDER

Quick, Powerful, Intuitive

TRAVERSE Mobile Order is designed to allow you to efficiently capture customer orders anytime, anywhere with a mobile PDA device. The information captured about customers and orders is more valuable because it's shared with the award-winning TRAVERSE accounting platform. It decreases order-entry time and eliminates double data entry.

Your sales representatives can focus more time on selling products and less time on entering orders. TRAVERSE bar codes can be printed onto labels, allowing you to quickly scan the item onto the order.

TRAVERSE Mobile Order offers two options: a tradeshow wireless option and a stand-alone option. The tradeshow wireless option allows devices to connect to the laptop to retrieve the data; the laptop is then synchronized with the TRAVERSE server. For additional mobility, you can download data from TRAVERSE directly to your stand-alone device.

TRAVERSE Mobile Order utilizes Microsoft's .NET framework, is Pocket PC 2003 compliant and seamlessly integrates with many bar code scanning devices.

Key Features

- Add orders for existing customers or add new customers
- Ability to quickly add customers and ship-to's on the fly
- Automatically verifies existing customer's credit limits
- Utilizes barcode scanners to quickly enter items into the order
- Allows prepaid orders
- Synchronizes orders to TRAVERSE accounting applications on demand
- Enter and print credit memos, invoices and shipped orders

Benefits

- Improves your customer service
- Full integration to TRAVERSE accounting applications
- Barcoding capabilities eliminate data entry mistakes
- Eliminates disparate systems and applications
- Order entry anywhere, any time for mobile sales force
- Synchronizes with TRAVERSE - no need to worry about double data entry
